Contents

Preface xiii
Contents xxiii

Section 1. Statistical mechanics

Interacting dimers on the honeycomb lattice: an exact solution of the five-vertex model
H.Y. Huang, F.Y. Wu, H. Kunz and D. Kim 1

$N = 2$ supersymmetry and Bailey pairs
A. Berkovich, B.M. McCoy and A. Schilling 33

Finitized conformal spectrum of the Ising model on the cylinder and torus
D.L. O'Brien, P.A. Pearce and S.O. Warnaar 63

Phase diagram in the generalized chiral clock models
H. Au-Yang and J.H.H. Perk 78

Effective action for the superfluid Fermi gas
P. Brussaard and Ch.G. van Weert 102

Analytical approach to the $t - t' - J$ model: Quasi-particle dispersion, Fermi surface and optical conductivity
S.I. Mukhin and L.J. de Jongh 115

Section 2. Soliton systems and integrability

Bäcklund transformations of solutions of nonlinear evolution equations and the Lie Bianchi transformation
E.M. de Jager, S. Spannenburg and M.H. Sitters 126

Peakons, r-matrix and Toda lattice
O. Ragnisco and M. Bruschi 150

Discrete Painlevé equations: coalescences, limits and degeneracies
A. Ramani and B. Grammaticos 160

On some integrable discrete-time systems associated with the Bogoyavlensky lattices
V.G. Papageorgiou and F.W. Nijhoff 172

The interaction equation
B. Fuchssteiner 189

Computational chaos in the nonlinear Schrödinger equation without homoclinic crossings
M.J. Ablowitz, B.M. Herbst and C.M. Schober 212

Order and the ubiquitous occurrence of chaos
A.S. Fokas and T. Bountis 236

Section 3. Nonlinear dynamics and chaos

The order–chaos–order sequence in the spring pendulum
J.P. van der Weele and E. de Kleine 245

Stochastic selfsimilar branching and turbulence
R. Kluiving and R.A. Pasmanter 273

Escaping orbits in trace maps
J.A.G. Roberts 295

Spatio-temporal chaos and intermittency in a 1-dimensional energy-conserving coupled map lattice
C.I. Christov and G. Nicolis 326

Area-preserving dynamics that is not reversible
J.S.W. Lamb 344

List of contributors 366
